

Running with Friends

Erica Putsche, Heidi So, Luke
Chang, Linsen Wu

The Problem

Running is a great way to stay healthy and active, but can also be a dull and repetitive routine. Running with friends can be an effective way to be kept accountable and encouraged.

Challenges

- Coordinating conflicting schedules
- Varying levels of running ability

Proposal

We propose Running With Friends, a mobile application that supports the ability to conveniently find friends to run with and organize running events.

Features:

- One-click signal to notify friends about a run
- SmartMatch to suggest other runners of similar ability to run with

The Inquiries (Real names have been changed)

Jade

- Routine: runs around the neighborhood (sometimes with her dog)
 - Runs alone because she finds it hard to find friends to run with
- Goal: to run 2-3 times a week

Alex and Eric

- Other friends prefer to lift weights or play basketball.

Three Women at Marymoor

- Run together when they can because of similar running ability and style.

Things to Do (Tasks)

1. Ability to record running statistics such as distance run, speed, number of runs, etc.
2. Share statistics with friends
3. Create running events and invite friends
4. Send mass notifications to friends for a spontaneous run
5. Find a SmartMatch (based on various criteria) to run with
6. Write and search for reviews on the route/experience

Getting to the Right Design: Initial Designs

Challenge With Wildburt

Wildburt's Run			Your Run		
Distance	Time	Score	Distance	Time	Score
1.38mi	1.5h	692	1.31mi	1.9h	751
2.28mi	.7h	436	2.24mi	.3h	151
3.18mi	1.2h	171			
8.2mi	2.4h	1,288	5.5mi	1.2h	902

Getting to the Right Design: Selected Designs

Design 1: Running separately

May add some motivation but does not provide the full experience of running with a companion

Design 2: Coordinating running events in advance

Tasks can be accomplished using Facebook events or other similar tools

Design 3: Spontaneous Running

Tasks are unique and they also address the concerns raised in our contextual inquiries. Our chosen design also provides us with an interesting opportunity to explore personal informatics

Jake's bored at home.
He wants to go on a
run and he defines.

Jake writes a short blurb
describing when he plans on
running.

Then he sends a mass
notification to friends
to tell them his
message.

The signal reaches all
Jake's friends.

Jake's friend, John accepts
Jake's siren and Jake
gets a notification of his
acceptance.

Jake meets up with
a friend and goes
on a great run!

Looking for
people to run with

No friends
available to run

Use Smartmatch to
find other runners

Get matched with
another runner

Invite runner to
run with you

Meet other runner
at predetermined
location

Go on a run!

Summary

- Fieldwork/contextual inquiries reveal real needs/concerns
 - difficulty finding friends (of similar level)
 - conflicting schedules
- Approaching the problem in various angles to design unique solutions
 - Initially, designs were distinguished by tasks
 - Eventually, they each encompassed a social theme
